# Coding in Ruby on Rails since 2009

Our Ruby on Rails team has helped clients successfully develop high-performing web applications for over 10 years.

Polcode has shipped dozens of successful Rails projects for global brands. From eCommerce stores, logistics platforms, and HR solutions, to eLearning websites and marketing automation, we expertly deliver quality Rails projects on your terms, and on time.

Polcode was named Top Ruby on Rails Developers in 2019 by Clutch.

Team Extension

As your reliable tech partner, Polcode augments your existing team with quick and remote hires dedicated to your business. Fill in specialized developer skills while avoiding costly in-house hiring processes.

Polcode is home to **over 20 mid-to-senior level Ruby on Rails Devs** who build enterprise-grade Rails products and consistently pass our challenging and rigorous code quality standards.

Our developers offer something uniquely trustworthy compared to other agencies:

➜ **Mid-to-senior Ruby on Rails Developers** with expert code architecture knowledge

➜ **Full-stack, full-service teams** able to write clean, well-documented, efficient code

➜ Knowledge of **PostgreSQL**, **MySQL** or **MongoDB**

➜ Knowledge of **readability and maintainability standards** of code focused on clean architecture

➜ **A rigorous education** and knowledge sharing approach to keep up with changing tech

➜ **Trained in soft-skills and adaptable** to your preferred workflows and tools

3-step Team Extension Process:

1
ANALYSIS
We get to know your business requirements and understand your expectations thoroughly.

2
CONTRACT & ONBOARDING
Sign our agreement and set the date for onboarding. During the onboarding conference call, you'll be introduced to your new team member(s) and begin assigning tasks.

3
DELIVERY MANAGEMENT
You'll be in touch with a delivery manager who will be a single point of contact for all process and business-related interactions.
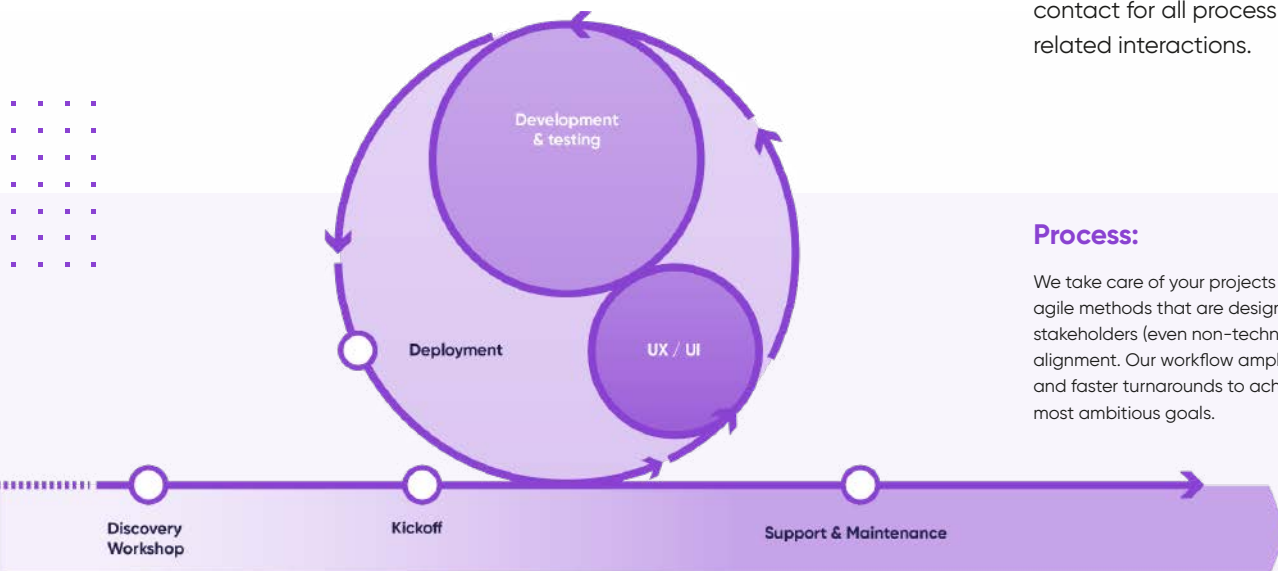

Full Cycle Product Development

We take care of your project from A to Z by leading your entire design & development process.

Carefully chosen professionals drive amazing results by working together:

- Project Managers
- Product Owners
- UX/UI Designers
- Graphic Designers
- Backend Developers
- Frontend Developers
- DevOps Engineers
- QA Specialists
- Solutions Architects

+ Dedicated Delivery Manager

You'll be in touch with a delivery manager who will be a single point of contact for all process and business-related interactions.

Process:

We take care of your projects with proven agile methods that are designed to get all stakeholders (even non-technical ones) in alignment. Our workflow amplifies collaboration and faster turnarounds to achieve even the most ambitious goals.

Audit Your Code and UX/UI

Our **Ruby on Rails audit** scrutinizes your current setup across technical elements (code and architecture) through functional components (UX and UI).

We identify points of interest, possible opportunities, and spot gaps or risks that could lead to problems.
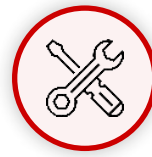

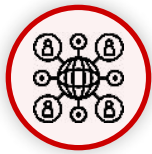

Our Types of Ruby on Rails Development:

Rails audit

Rails custom development
from scratch or taking over existing projects

Rails web application development

Rails technical support and maintenance

Social networking applications
traffic-heavy apps

**Cost-effective and fast development of MVPs**

Platforms that support complex databases

Our Ruby on Rails-adjacent Technologies

Languages:

muse™

Building a client database with Polcode increases customer satisfaction

After building a guided meditation studio together with Polcode, InteraXon set out to improve customer care for their consumer electronics verticals. Together, we built an internal data warehouse that made sense of their customers' purchase history and experiences all in one place.
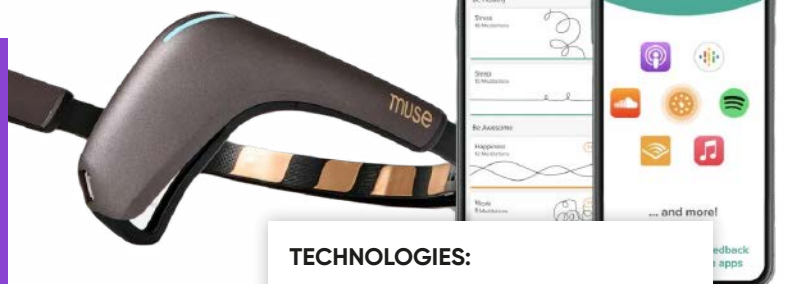

KEY DELIVERABLES:

- ✓ Backend Development
- ✓ Web Development
- ✓ Mobile Development
- ✓ Team Extension
- ✓ A dedicated RESTful API for the native mobile app

> **"**
>
> We worked with Polcode before on other projects with great results and positive feedback from the team so we reached out to them when the new project came up.
>
> **Polcode developers are extremely experienced and have great communication skills, and to top it all off, they feel like they're part of our team.**
>

GIPSYY
know no limits

Redesigning a National Public Transportation App

Gipsyy is a long-distance bus transportation app, allowing users in Portugal to schedule their optimal bus routes, purchase tickets, and review their payments—all within a convenient mobile and web app.

Polcode received this project after another agency had provided unsatisfactory results. A scrapped software journey presents an opportunity for new routes. We've rewritten their web-based Rails app from scratch, as well as the mobile versions for the Android and iOS app stores.

Throughout our journey in developing the Gipsyy app, we always kept in mind who the product was for. Identifying a passenger's needs, motivations and key friction points motivated our team to help users make clear decisions and book trips without hiccups.
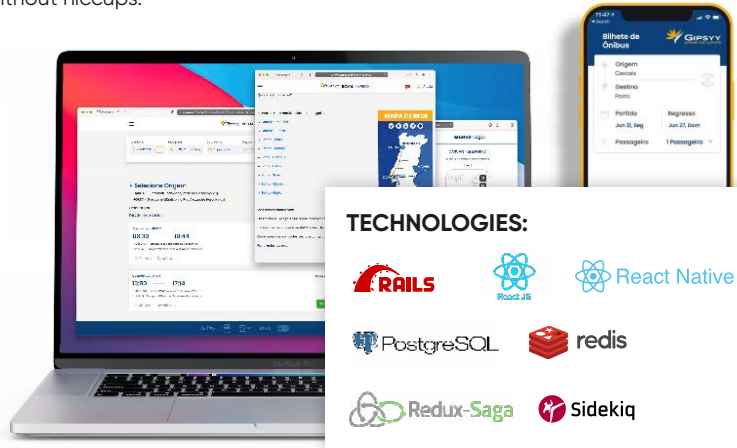

KEY DELIVERABLES:

- ✓ Backend Development
- ✓ Frontend Development
- ✓ Web Development
- ✓ Mobile Development (Android and iOS mobile versions)
- ✓ Quality Assurance
- ✓ UX/UI Design
- ✓ 3rd party integration

> Polcode turned our partnership into what felt like a professional and cohesive team. **They are always available and flexible in their approach**, yet still provide systematic, step-by-step solutions to the problems we faced while building the previous version of the app.

PHILADELPHIA
MACARONI COMPANY

Structuring an intranet on Ruby on Rails with features such as document sharing, workflow management, and automatic notifications

Polcode developed the Intranet for Philadelphia Macaroni, an industrial food manufacturing company that makes pasta for other, larger food companies. The system was built from scratch and it's constantly being maintained (adding new features, bug fixing, upgrades, tests).

It contains a set of highly specific software applications helpful in everyday production routine. Among them there are: a clients' complaints module, a module handling requests for samples or internal quality control module. And also a number of useful features like calendar or lists of users, clients, suppliers, carriers, products, etc.

KEY DELIVERABLES:

- ✓ An Intranet on Ruby on Rails
- ✓ Backend Development
- ✓ Maintenance
- ✓ Bug Fixing
- ✓ Ruby on Rails upgrades

> We started with 1 application, and 10 years later, we now have a dozen applications that a couple of hundred of users across the country utilize. We've had so many compliments from our customers and suppliers, as well as from several inspectors. They're amazed that we created this custom system. **Polcode accommodates me 100% of the time, and does it with full efficiency. They did a great job, and taught me a lot as well.**
>
> Moreover, they've always been extremely responsive, and they speak English very well.

Linda Schalles, Project Manager at Philadelphia Macaroni
